

Cervical Screening and Treatment Training

**Elimination Partnership in the Indo-
Pacific for Cervical Cancer
(EPICC)**

**Participant Workbook
2025**

Table of contents

Participant Workbook	2
Table of contents	4
Session 1 – Welcome	10
Course overview:	10
Session 2 – Introduction to cervical screening and treatment.....	13
Session 3 – Self- collection / Cepheid	14
Session 4 – Infection control	16
Session 5 - Health promotion	17
Activity 1 – Customise key messages	18
Activity 2 – How do we encourage women to attend screening and treatment?	20
Discussion – Identifying barriers and enablers.....	21
Discussion – Supporting clients with disabilities	22
Activity 3 – Flipchart roleplay	23
Session 6 – Anatomy and Physiology	24
Activity 4: Label anatomy.....	25
Activity 5: Normal cervixes with variations	28
Session 7 – Abnormal vaginal and cervical findings.....	34
Activity 6: Common vaginal and cervical infections.....	35
Session 8 – Consultation and counselling.....	37
Activity 7: Components of informed choice.....	38
Activity 8: Counselling skills practice	39
Counselling case scenarios	40
Checklist.....	43
Session 9 – Visual assessment.....	44
Review	45
Activity 9: Determining Eligibility	46
Session 10 – Thermal ablation.....	59
Session 11-12 – Procedure & Practical	61
Session 13 – Case studies.....	65
Additional Resources	76
Appendices	79
Assessment	95
Competency ‘sign off’ checklist.....	96

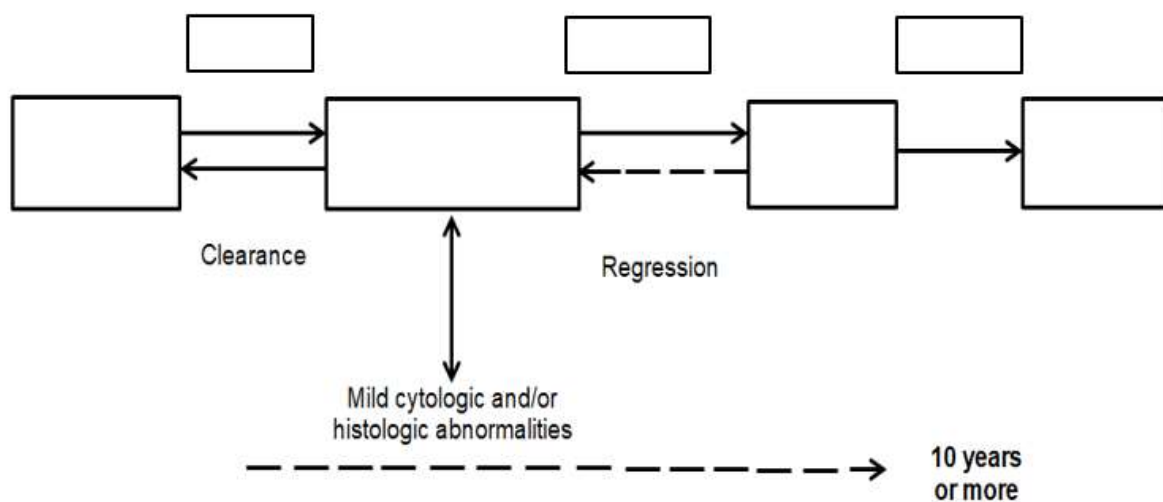

Session 3 – Self- collection / Cepheid

Learning objectives:

1. Understand the benefits of HPV screen and treat approach
2. Support clients with HPV self-collected swab
3. Knowledge of clinician collected HPV swabs
4. Introduction into GeneXpert machine and equipment

Session Notes:

Fill in the blanks:

Activity Notes:

Case study 4: Monica

Monica is 54 years old. Another healthcare professional has advised Monica to come for screening today as she has had episodes of post-coital bleeding (PCB) for a few months. Monica stopped having periods when she turned 50 years old. Monica's medical history is as follows:

- Has had 6 children, all delivered vaginally without complications.
- Mild uterine prolapse
- Post-menopausal
- Ongoing episodes of PCB for about 6 months
- Last pap smear was 15 years ago- Monica is unsure of the result

1. *Following her medical history, is Monica eligible for screening?*

2. *How would you counsel Monica prior to screening?*

3. Monica proceeds with screening and tests **HPV+**.
Monica gives informed consent to proceed with undergoing visual assessment.

Would we proceed with visual assessment if Monica had tested negative to HPV?
